

Dubai Recycling Park appoints Campbell Reith Hill International

National Projects Holding Co., through its Dubai Interests subsidiary, has appointed Campbell Reith Hill International with the design contract for Dubai Recycling Park (DRP).

Located within Dubai Industrial City, DRP will be the first fully integrated waste management and recycling park in the Middle East.

'This follows Dubai Industrial City's recent approval of the feasibility study for Dubai Recycling Park,' said Abdullah Hayat, Deputy General Manager, National Projects Holding Co.

'The master plan was conducted by Remondis and now Campbell Reith Hill International will manage the design contract for DRP and be responsible for the architectural identity of the project.'

Mr Nicholas Majdalani, Regional Director, Campbell Reith Hill International and Mr Abdullah Hayat, Deputy General Manager, National Projects Holding Co., sign the agreement to commence the design contract for Dubai Recycling Park.

Campbell Reith Hill International is a London-based consulting engineer firm, specialising in structural, civil, transportation, geotechnical and environmental engineering. They will be responsible for all engineering studies regarding the Dubai Recycling Park project, in addition to utilities, traffic and environmental impact studies.

'We will have an integrated approach to the environmental, design and engineering aspects of this development,' Marwan Gerges, General Manager, Dubai Interests.

'We believe this visionary project encapsulates the way forward for the Middle East, and consider Dubai Recycling Park our most important project from a socially responsible stand point. We expect it to have a tangible impact on lowering Co2 emissions from the region.'

Dubai Recycling Park will be developed on a site measuring 1,500,000 square feet with a 49 year lease agreement with Dubai Industrial City. Construction is planned to commence in the first quarter 2008 and will be fully completed within the following 18 months.
